

Excellence in film coating solutions for architecture, glass, signage

The Chameleon is an amazing creature... able to change it's colour and appearance to communicate, to express emotions and to adapt to its environment. Therein lies the parallel with Cooltone, for we offer not only the latest in protective films, but also a wide spectrum of decorative films and output technologies that allows our customers the freedom to express their individuality and creativity.

Cooltone started operations in 1981 providing window tinting for homes and automobiles, and later commercial buildings. Since then, like the Chameleon we've been constantly changing, evolving and adapting to new environments and markets as rapid advances in film technology have allowed us to expand both our products and our services.

Today we offer more and more innovations in specialist films for solar, safety, security and decorative purposes, as well as signage and architecture.

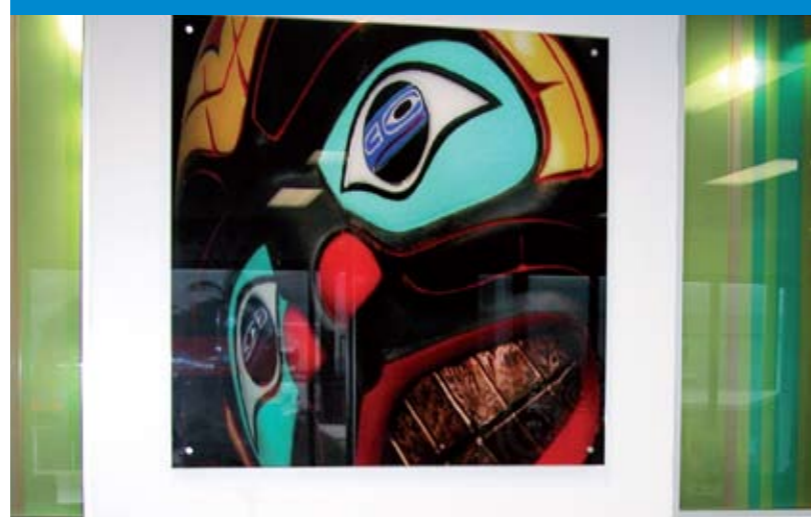

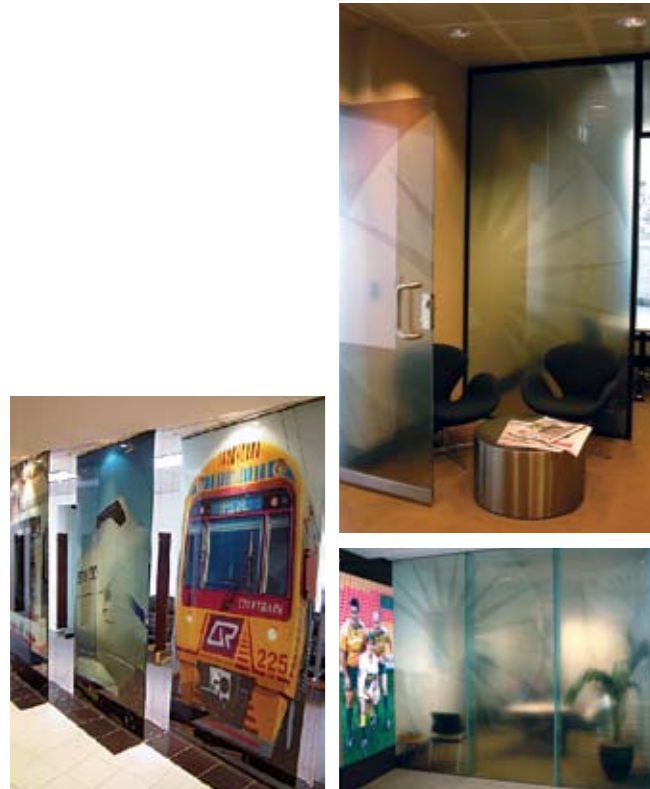

The breadth of technical experience we've gained from working on all manner of residential developments, banks, hospitals, schools, shopping malls, transportation, and airports, give us a unique advantage when it comes to providing each and every client with the best possible film coating solutions and service.

**Cooltone.** *We're constantly changing for the better of our customers.*

### Bringing art to glass

Windows have evolved. Glass is the new medium for artists and designers to realise their imaginative vision. What was once only a dream is now possible. The reality of digital printing has enabled virtually any concept to become practicable, affordable and remarkable.

Cooltone has not only embraced the digital print world, we have pushed the boundaries in new directions. Every day we successfully respond to challenges set by imaginative designers, artists and marketers, to which we respond with professional service, high quality production and superior installation. Our work is well known and highly regarded amongst the design fraternity and the media. We welcome their interest and encourage designers to think outside the square.

We are proud to present our new range of digital printing with the latest in digital print technology, enabling you to create fantastic full colour graphics of any size for glass panels and partitioning.

# precision-cut film

## precision-cut film

Bringing versatility to glass

Glass is one of the most versatile materials within the commercial building industry today. As a cladding, glass is waterproof, light and easy to install. As office partitioning, glass provides cost-effective semi-permanent walling. Glass is also the perfect substrate for decorative film. From simple frosted panels of glass providing privacy to business, to elaborate precision-cut designs that create ambience and character, there's an exciting film solution for all panels of glass.

In modern architecture, glass has become a blank canvas for designers to create stunning walls of colour and texture, vary levels of privacy, and allow filtered light to interiors.

Cooltone provides a full 'in-house' design and precision-cutting service to ensure your next pane of glass will be anything but ordinary.

# signage

## signage

Bringing communication to life

Communication is important to every organisation. Despite earlier expectations for the paper-less business, print-based communication is now more important than ever. In such an environment, signage needs to stand out and make a statement just to cut through the clutter. From simple directional signage to complete corporate branding, it must have an impact.

Cooltone has a growing reputation in the signage industry with creative solutions to basic and complex communication requirements.

When you have something to say, let Cooltone help you say it.

# solar film

## solar film

### Bringing comfort to buildings

Since the first buildings were designed, architects have struggled to balance the need for natural light in building interiors against the provision of thermal comfort to the people who live and work inside. Air conditioning provides a mechanical solution, but it comes at a cost. Energy is getting more expensive and the systems needed to heat and cool commercial spaces place a demand on consumption and contribute to green house emissions.

Solar window film provides a clear solution to lowering energy consumption. With solar energy reductions of up to 81%, air conditioning can operate more efficiently, improving costs and reducing the impact on the environment. All solar films used by Cooltone have been star-rated as part of the Australian Window Energy Rating Scheme.

Clever building managers have upgraded their windows to include solar film, passing the energy savings on to tenants who benefit from comfortable indoor environments, a reduction in glare on computer screens and improved employee satisfaction.

Whichever way it's viewed, solar window film makes business sense.

# safety and security

## safety and security film

Bringing safety to glass

'Duty of Care' is a statement that is used more than ever in modern society. From simple awareness to possible danger to complex threat assessment, building managers must consider the safety of people in and around the built environment.

Glass is often considered the weakest point in a building. Windows that break in extreme climatic conditions or as a result of terrorist action can cause major damage and serious injury. Flying sharp shards of glass can be avoided by installing clear window film designed to maintain the panel of glass in one piece following impact.

Cooltone provides a range of films to deal with the specific nature of any threat. From film designed to bring old glass up to current Australian Standard (AS1288), to bomb blast film for high-threat public spaces, there is an advanced solution to solve your risk assessment.

# anti-graffiti

## anti-graffiti film

Bringing relief from graffiti

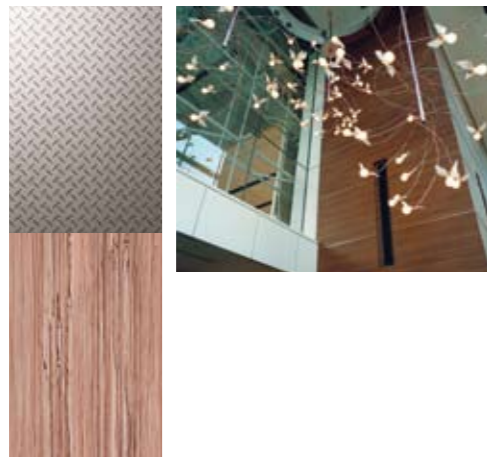

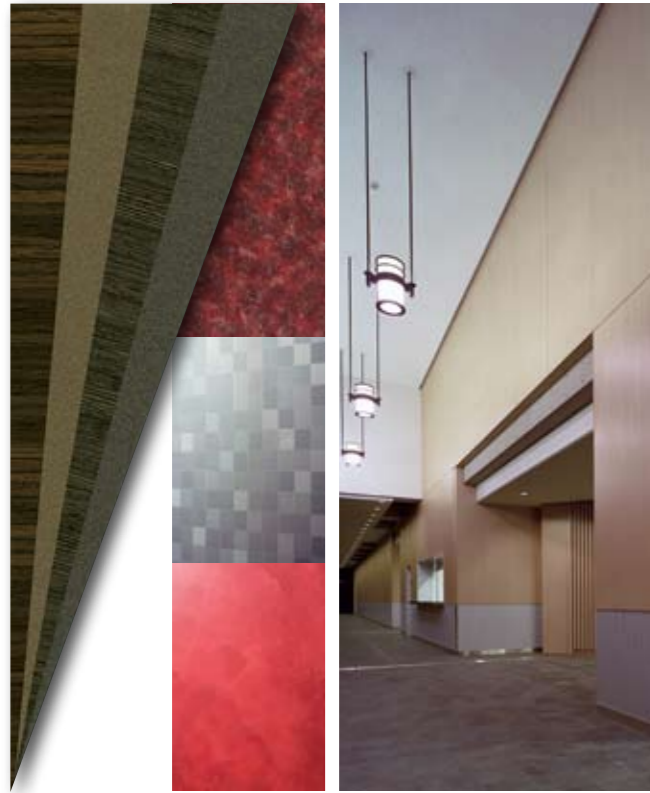

Graffiti and vandalism are unfortunately growing issues in the community. For facility managers, this problem causes visual damage to buildings and structures and usually demands costly removal.

An innovative approach to the problem sees clear anti-graffiti film installed onto glass, stainless steel, marble or perspex to protect the substrate from damage by absorbing the graffiti into the film. Simple removal and replacement of film, rather than expensive and time-consuming cleaning-up or total replacement, makes economic sense and ensures a quick response to the visual aspect of the problem.

Cooltone can provide cost-effective anti-graffiti and vandal-protection solutions for your building or structure before this malicious problem damages more than your bank account.

# Di-Noc™ decorative

## Di-Noc™ decorative architectural film

Bringing options to architecture

As the costs of building materials and labour increase, architects and interior designers often find themselves restricted to relatively basic construction techniques and textures. But that doesn't have to mean boring finishes.

Cooltone offer an exciting alternative to flat painted surfaces. Using versatile 3M Di-Noc™ self-adhesive film, we can provide cost-effective finishes to almost any interior or exterior surface, including curved or irregular ones, and even substrates.

Di-Noc™ is available in 25 exciting stock colours accurately replicating different finishes including woodgrains, metal, marble, leather, stone, stucco and more. This versatile film laminate is perfect for everything from wall panels and furniture to floors ceilings, and offers proven durability in almost any situation.
